Full Course Description:	
Couse ID: 2115041701	Description: Pediatrics 1
Full Course Description: The training in the first year of the residency program will focus on inpatient pediatrics. The resident will <input type="checkbox"/> have rotations in the pediatric floor, pediatric intensive care and neonatal intensive care units. The resident <input type="checkbox"/> will be part of a team that in composed of one or two junior residents (first or second year level) and a <input type="checkbox"/> senior resident (third or fourth year level), in addition to the consultant specialist. The resident spends 6-8 <input type="checkbox"/> months in the pediatric floors, where he/she will be exposed to all subspecialty as well as general inpatient <input type="checkbox"/> pediatrics, and 4 months in the neonatal intesive care unit which is a tertiary unit that takes care of both <input type="checkbox"/> preterm newborns as well as term newborns with acquired or congenital health problems requiring <input type="checkbox"/> intensive medical care.	
Couse ID: 2115041702	Description: Pediatrics 2
Full Course Description: During the second year of training, the resident will be exposed to some ambulatroy pediatrics including <input type="checkbox"/> emergency medicine and subspecialty pediatric outpatient clinics, with a total of 3-4 months. The rest of <input type="checkbox"/> the year will be devided between pediatric floor and pediatric and neonatal intensive care units. The role <input type="checkbox"/> of the second year resident in the pediatric floor will include the same duties as the first year resident, but <input type="checkbox"/> in addition he will have some more advanced duties such as supervision of the first year resident, which <input type="checkbox"/> prepares the resident to become a team leader in the following year

College: Medicine

Department:

Couse ID: 2115041703 **Description:** Pediatrics 3

Full Course Description: The resident in the third year of training will spend about 5 months of the year as a team leader in the ☐ pediatric floor where he supervises the junior resident, makes and formulates management plans in ☐ conjunction with the consultant specialist, and makes certain that the plans are carried out in a timely ☐ fashion. The rest of the year will be spent as two months in the neonatal intensive care unit where the ☐ resident role will also be a team leader. There will also be five months spent in the ambulatory pediatrics, ☐ divided between emergency pediatrics (1-2 months) where the resident will take care of acute ☐ emergencies in children, also during that time the resident will master many skills of examination and ☐ investigational interventions to patients. Part of the resident training during those rotations will also be the ☐ examination of normal newborns in the nursery before being discharged to home.

Couse ID: 2115041704 **Description:** Pediatrics 4

Full Course Description: The fourth year of training in pediatrics will have a greater emphasis on outpatient subspecialty pediatrics ☐ where the resident spends 6-7 months in the pediatric clinics. The resident will have more opportunities to ☐ see different pediatric subspecialty patients, make management plans and discuss plans with the ☐ consultant. There is also a major role in teaching medical students who rotate in the pediatric outpatient ☐ clinic.

Couse ID: 2115051701 **Description:** Obstetrics and gynecology 1

Full Course Description: The programme aims to train doctors in obstetrics and gynaecology who are highly competent in managing the complete range of conditions that arise in women's reproductive health and well-being with the latest evidence-based approaches and the highest of ethical standards. These future specialists are trained to be able to lead the specialty, provide clinical care of high standards, and participate effectively in fields of development and research.

Couse ID: 2115051702 **Description:** Obstetrics and gynecology 2

Full Course Description: The programme aims to train doctors in obstetrics and gynaecology who are highly competent in managing the complete range of conditions that arise in women's reproductive health and well-being with the latest evidence-based approaches and the highest of ethical standards. These future specialists are trained to be able to lead the specialty, provide clinical care of high standards, and participate effectively in fields of development and research.

Couse ID: 2115051703 **Description:** Obstetrics and gynecology 3
